

AnywhereMap® now available for \$95!

Pittsburg, KS – Control Vision Corp., makers of the AnywhereMap®, AnywhereWx®, Pocket Plates®, and Anywhere EFB portable navigation systems announces a new low price on its award-winning AnywhereMap software.

Pilots who use handheld computers such as PDAs and PDA/phones, can now add fully functional moving map navigation software to their units for only \$95 including 6 months of updates. This is not a pared-down version of the software. It is the COMPLETE moving map system with flight planning, enroute flight management, patented Cones of Safety®, Emergency Mode, terrain, obstacles and hundreds of additional features. AnywhereMap is “navigation made easy” since it uses the familiar Windows software interface.

Simply add a GPS receiver and you’re up and running. Need the GPS too? Our kit, which includes the software, Bluetooth GPS10, power cord and mount, is only \$345. That, plus your PDA, is everything you need for a pocket moving map!

Want more? AnywhereMap’s website 100LL.COM is now up and running. Now AnywhereMap customers get a rich airport directory that they can update directly to the AnywhereMap’s database that *also includes fuel prices*. Now pilots can get good airport information AND fuel prices before they leave and while enroute. Just taking a pleasure flight? Check out AnywhereMap’s new on-screen fuel graphics and **Fuel Nearby** function – all made available through 100LL.COM.

As always, AnywhereMap customers can upgrade to AnywhereWx using XM WX® weather in one easy step. Add *real* instrument approach plates and complete the Anywhere EFB suite. Flexibility, low cost of ownership, and *real upgrade paths* without throwing everything out and starting over – that’s AnywhereMap and 100LL.COM!
